

Safety Rules Acknowledgement Form

Skyline Robotics Club

Basic expectations

Robotics club uses and works with tools and machinery that can be dangerous without proper treatment. For these reasons, we require all club members and guests to follow several safety rules. Failure to do so can result in removal from the club. These rules are listed below, and can also be found in the club constitution.

Don't do dangerous things

Club members must not misuse tools or act in a way that endangers the safety of themselves, others, or equipment. Students are only permitted to use tools once they have received appropriate training, and may not use the machine room. Students may only use power tools when a mentor is in the room. Students may not use tools in the mini-work room (i.e. drill press, band saw, chop saw, and belt sander) unless they receive proper training and have completed the appropriate paperwork. Skyline Robotics Club and its mentors are not responsible for any injury or death that occurs.

Keep the build room clean

When working in the build room, members must keep the room and their environment clean and ordered. No food is allowed inside the build room at any time. Drinks are allowed, as long as they are kept in sealed containers.

Wear appropriate clothing

When inside the build room, all members must wear eye protection, tie back long hair, and secure loose clothing.

By signing this document, you hereby agree that you and your parents/guardians have read and understood the above rules and agree to abide by them. Failure to do so could lead to removal from the club.
